AT&T Corporate Real Estate - Design & Construction has had a working relationship with Osborne Electric for over 25 years during which I have been directly involved as a Project Manager as well as the Area Manager for all building construction for AT&T facilities in Oklahoma and Arkansas.

During those past 25 years Osborne Electric has provided electrical contractor services on over 8,000 separate electrical projects formerly for Southwestern Bell Telephone, SBC Corporation and currently for AT&T.

Project work has ranged from the installation of simple electrical circuits up to installing UPS systems in our Data Centers and our new Video Hub offices as well as being the electrical contractor on the single largest standalone electrical project ever performed for AT&T in Oklahoma with the standby generator electrical project at our Downtown Oklahoma City complex.

Osborne Electric has shown their expertise in project coordination and meeting our system installation criteria to protect our Telephone switching equipment and they are certainly qualified to work on the most sophisticated electrical systems.

A handwritten signature in cursive script that reads "Wendell Cavin".
