

Frankfurt Short Bruza Architects Engineers Planners

"FSB has worked with Osborne Electric for over forty years, on a wide variety of projects including state-of-the-art facilities for the Hertz Corporation. These have included the Hertz Data Center and the World Wide Reservation Center where they have installed and placed into service diesel engine drive generators, large multi-module UPS systems, static switches and PDU's as well as other highly technical systems.

Osborne Electric's personnel excel in planning the installation of critical data systems. They clearly understand the highly sophisticated engineering requirements of data center facilities and continually exceed the owner's expectations. Their flexibility and thorough coordination with other trades is a real asset on complicated projects. They are a great business partner with a "can do" attitude!"
