

Re: Letter of Reference for Osborne Electric Company

To Whom It May Concern:

This letter of reference is on behalf of Osborne Electric Company. Osborne Electric Company was contracted by Perimeter Technology Center to design, implement, and maintain Perimeter's electrical infrastructure for our newest high available data center which was completed in September, 2008. Although Perimeter had many companies to choose from regarding our electrical infrastructure needs, Osborne Electric Company was selected based on their outstanding reputation for completing comprehensive designs. Another key factor in the decision was Osborne's ability to work with our engineering staff to complete the project on time and on budget. Perimeter Technology took a great deal of effort in its selection process of an electrical contractor and it certainly proved to be the right decision.

Osborne Electric Company exceeded our expectations in every phase of the project. Their communication before, during, and after the completion of the project was invaluable in the success of completing the project. Their ability to reach out during all phases of the project from a consulting standpoint also made the teamwork seamless.

Based on experience with Osborne Electric during our new data center project, Perimeter Technology Center selected Osborne to perform maintenance work on all three of our high available data centers in Oklahoma. We have been exceptionally pleased with the integrity of the work performed, the open lines of communication, and the professionalism that Osborne Electric has displayed throughout their tenure with Perimeter Technology Center. We look forward to a long lasting relationship and plan to utilize Osborne Electric on any future data center projects. Perimeter Technology highly recommends Osborne Electric to any company considering contracting them and we certainly endorse their credibility as one of the finest electrical contractors in Oklahoma.

If you have any questions or would like further details about Osborne Electric Company, Perimeter Technology Center will be glad to visit with you about our experiences. Please feel free to contact me at schase@perimetercenter.com or call me at (405) 917-3715.

Respectfully,

Stan Chase
Chief Operating Officer
