

To Whom It May Concern:

I have worked for over 35 years with Osborne Electric at the commercial office complex in downtown Oklahoma City, Oklahoma previously owned by the Kerr-McGee Corporation and currently owned by SandRidge Energy. Osborne Electric has worked on a wide variety of projects over the years ranging from the installation of wall outlets and lighting, Data Center power, phone/data wiring, steam and diesel engine drive generators, Fire/Life Safety systems and Energy Management systems, as well as providing all electrical work involved in the current remodel of our 30 story office building.

Osborne Electric's personnel excel in planning and installation of electrical components, including critical data systems. They clearly understand the highly sophisticated engineering requirements of data center facilities as well as the everyday repair, maintenance, operation and installation of normal equipment and systems. Their flexibility and thorough coordination with other trades is a real asset on complicated projects. They are a great business partner with a "can do" attitude.

Best regards,
